. Northstar Community Bank — Employee Identity Lifecycle Workflows

Project Type: Simulated HRIS and Workforce Identity & Access Management (IAM) Project

Project Overview

This simulated project demonstrates how Human Resources, managers, and Identity and Access Management (IAM) teams coordinate employee identities and access throughout the employment lifecycle.

The project examines three core processes: Joiner, Mover, and Leaver (JML), using a fictional banking environment.

1. JOINER WORKFLOW — New Employee Onboarding

Scenario: Sarah has been hired as a Customer Service Representative at Northstar Community Bank. Her start date is December 1.

A. HR Responsibilities

- Create Sarah's employee record in the HRIS.
- Record her full name, employee ID, job title, department, manager, employment status, and start date.
- Complete the required employment documentation.
- Provide company policies, employee orientation, and required training.
- Ensure her employee information is accurate and available to support the onboarding process.

B. Manager Responsibilities

- Identify the applications, systems, and resources Sarah needs to perform her job.
- Submit an access request specifying the required roles and permissions.
- Review and approve the business justification for the requested access.
- Ensure Sarah's requested access aligns with her job responsibilities.

C. IAM Responsibilities

- Receive Sarah's employee information from the HRIS or approved onboarding workflow.
- Create or provision her digital identity.
- Assign the appropriate roles and permissions based on approved access requests.
- Configure access to the necessary customer service applications and resources.
- Enforce applicable authentication requirements, including MFA.
- Ensure her approved access is available by December 1.
- Record access provisioning activities for auditing purposes.

D. Required Approvals

- HR confirms Sarah's employment information.
- Her manager approves the business need for access.
- Application owners or designated approvers approve additional restricted access when required.
- IAM provisions access after the necessary approvals are obtained.

E. Security Controls

- **Principle of Least Privilege:** Sarah receives only the access necessary to perform her job.
- **Role-Based Access Control (RBAC):** Access is assigned according to her Customer Service Representative role.
- **Segregation of Duties (SoD):** Conflicting responsibilities and permissions are restricted.

- **Multi-Factor Authentication (MFA):** Additional verification is required when accessing protected systems.
- **Audit Logging:** Access requests, approvals, and provisioning activities are recorded.

F. Expected Outcome

By December 1:

- Sarah has an active employee record in the HRIS.
- Her digital identity and approved access are provisioned.
- She can access the customer service applications and information required for her role.
- Her physical building access badge is available, if applicable.
- Required onboarding and security training are assigned.
- Access provisioning activities are documented for audit purposes.

2. MOVER WORKFLOW — Employee Department Transfer

Scenario: David transfers from the Human Resources department to the Finance department, effective December 1.

A. HR Responsibilities

- Update David's employee record in the HRIS.
- Change his department, job title, and reporting manager.
- Record December 1 as his effective transfer date.
- Ensure the updated employee information is accurate and available to the IAM system.

B. Manager Responsibilities

- Identify the applications, systems, and resources David needs for his new Finance responsibilities.
- Submit an access request specifying the required roles and permissions.
- Approve the business justification for the requested access.
- Identify any access restrictions or segregation-of-duties requirements.

C. IAM Responsibilities

- Receive and process David's employee transfer information.
- Remove HR-specific roles, permissions, and application access that are no longer required.
- Update relevant identity attributes and group memberships.
- Provision approved Finance application access and permissions.
- Ensure the access changes are completed by the effective transfer date.
- Keep David's general employee identity active.
- Document all access modifications and provisioning activities.

D. Required Approvals

- David's Finance manager approves the business need for the requested access.
- Application owners or designated data owners approve access to restricted systems when required.
- IAM implements the changes after the necessary approvals are obtained.

E. Security Controls

- **Role-Based Access Control (RBAC):** David's permissions are aligned with his new Finance role.
- **Principle of Least Privilege:** He receives only the access necessary for his new responsibilities.

- **Access Revocation:** Unnecessary HR permissions are removed.
- **Segregation of Duties (SoD):** Conflicting permissions are identified and restricted.
- **Access Reviews and Audit Logging:** Changes are reviewed and documented for accountability.

F. Expected Outcome

After December 1:

- David's employee record reflects his new Finance position.
- His unnecessary HR application access and permissions have been removed.
- His approved Finance applications, information, and resources are accessible.
- His general corporate identity and email remain active.
- Appropriate physical access and work equipment are available for his new role, where applicable.
- All access changes and approvals are documented for audit purposes.

3. LEAVER WORKFLOW — Employee Termination

Scenario: Michael's employment at Northstar Community Bank ends on December 15.

A. HR Responsibilities

- Update Michael's employment status to **Terminated** in the HRIS.
- Record his official termination date.
- Confirm his department, job title, manager, and other relevant employment information are accurate.
- Ensure the termination information is communicated to IAM through the approved HRIS workflow or notification process.
- Retain his employee record according to the bank's record-retention policies.

B. Manager Responsibilities

- Notify HR and coordinate Michael's departure.
- Confirm his final working day and coordinate the termination process.
- Submit or confirm the request to revoke Michael's roles, permissions, and application access.
- Coordinate the return of company equipment, including his laptop, badge, keys, and other assigned property.
- Notify relevant teams of any outstanding responsibilities or access-related concerns.

C. IAM Responsibilities

- Receive and process Michael's termination information.
- Disable his primary corporate account and digital identity.
- Revoke his access to banking applications, email, VPN, shared resources, and other company systems.
- Deprovision unnecessary accounts, roles, group memberships, and permissions across connected applications.
- Revoke active sessions, authentication tokens, and credentials where applicable.
- Deactivate his physical access credentials through coordination with the appropriate security or facilities team.
- Verify that his access has been removed across all relevant systems, including connected applications and standalone accounts.
- Document all access-removal activities for audit purposes.

D. Required Approvals

- HR confirms and records Michael's employment termination.
- His manager confirms the departure and communicates any relevant access requirements.
- Application owners or designated access owners are involved where required by bank policy, particularly for restricted systems or documented exceptions.
- IAM carries out the approved access-removal process and documents its completion.

E. Security Controls

- **Immediate Revocation of Access Rights:** Ensure access is removed promptly according to the termination schedule and bank policy.
- **Principle of Least Privilege:** Ensure Michael no longer retains permissions that are not required after employment.
- **Access Verification:** Confirm that all accounts, applications, and permissions have been disabled or removed.
- **Audit Logging:** Maintain records of termination notifications, approvals, account disabling, access revocation, and verification.
- **Notification and Monitoring:** Notify relevant teams of the termination and monitor for unauthorized access attempts where appropriate.
- **Contractual Post-Employment Obligations:** Remind Michael of applicable confidentiality, data protection, and other continuing obligations after employment ends.

F. Expected Outcome

After December 15:

- Michael's employment status is updated to **Terminated** in the HRIS, while his employee record is retained according to the bank's record-retention requirements.
- His corporate digital identity and primary account are disabled.
- His access to banking applications, email, VPN, shared resources, and other company systems is revoked or deprovisioned.
- His physical building access badge and other access credentials are deactivated.
- His laptop, keys, badge, and other company property are returned to the bank.
- IAM verifies that his accounts and permissions have been removed across relevant systems.
- All termination-related access changes, approvals, and verification activities are documented for audit purposes.

Project Conclusion

Through the three simulated deliverables—**Joiner (New Employee Onboarding), Mover (Employee Department Transfer), and Leaver (Employee Termination)**—this project demonstrates how HRIS and Identity and Access Management (IAM) work together to manage employee identities and access throughout the employment lifecycle in a banking environment.

Each workflow illustrates how changes recorded in the HRIS must be communicated to IAM to ensure that employee identities and access permissions are provisioned, modified, or revoked according to employees' job responsibilities and employment status.

These deliverables highlight the importance of coordination between HR, managers, application owners, and IAM teams in maintaining accurate employee information, enforcing appropriate access controls, and ensuring timely access changes.

Ultimately, effective HRIS–IAM coordination helps banks reduce unauthorized access risks, protect sensitive employee and customer information, support access governance, and maintain reliable audit records.
